

▶▶ CLOUD SERVICES

**vissensa**  
forward thinking

## Clouds for every business requirement

Vissensa has operated its own cloud infrastructure for a number of years and has developed many of the cloud types required to cater for a diverse range of business requirements. That's why Vissensa is able to offer a guaranteed SLA on all its clouds.

## Trusted partnership

Moving to the cloud or making use of more than one type of cloud, is a big step. That's why we work in partnership with your management and technical teams, to ensure the right clouds are deployed safely and securely for the right workloads.

## Total flexibility

Your requirements will change, that's why we don't lock you in to a specific service, and always monitor how you are using the services. This ensures we provide the best advice on how to improve delivery or reduce cost. Sound different? That's why we're in business - give us call to discuss your cloud requirements

## PRIVATE CLOUD

### ▶ YOUR PLATFORM ON YOUR TERMS

Vissensa's private clouds make enterprise computing accessible and affordable for all. Organisations keen to use dedicated platforms to enable growth in their business, can benefit from a fully managed service rather than considering a CAPEX expense or deployment on a public cloud with little control and no Service Levels (SLA).

### ▶ JOINING THE DOTS

There are hundreds of clouds to choose from in the market. What makes Vissensa different is how we join our cloud services together to allow our clients to benefit from flexible platforms, that are managed and monitored under strict SLA's and with direct access to the major private clouds or other vendor networks if required.

### ▶ DEDICATED EQUIPMENT, DEDICATED SUPPORT

Choosing a managed IT solution from Vissensa allows you to select how and where you deploy each aspect of your business IT service. We support on premise, part managed and datacentre managed topologies, and can integrate these together to provide a converged IT strategy for your business.

## SHARED CLOUD

### ▶ FLEXIBILITY AND PERFORMANCE

Vissensa's Shared Cloud Services platform offers access to genuine multi-platform, cloud solutions with unparalleled flexibility to grow and burst with superior service levels and on demand technical experience that is simply not available in the major public cloud models.

### ▶ THE VISSENSA CLOUD DIFFERENCE

At Vissensa we want you to experience the benefits of public cloud flexibility and economics without having to pay a premium, forgo the ability to call a real helpdesk person, or arrange for technical support to help you with any aspect of your deployment. We also provide the service level commitments against everything we do.

### ▶ THE ULTIMATE DEPLOYMENT FLEXIBILITY

You can use Vissensa clouds for any type of deployment including Power, AIX and Linux and we see many of our clients using our shared clouds to dramatically reduce the cost of their DR or to develop Database or Analytics as a Service solutions.

## PUBLIC CLOUD

### ▶ SECURE DIRECT PUBIC CLOUD ACCESS

Vissensa is one of the few Cloud Service Providers who genuinely delivers a multi-platform hybrid cloud solution. We deliver public cloud access from within the security of a private network – so your public cloud use never has to use the internet. As a result, we've developed services for some of the most demanding public/private use cases.

### ▶ SECURITY AND CONVERGED IT

Our public cloud access addresses CISO and governance concerns about data traversing the internet to get to public cloud deployments.

The ability to move workloads seamlessly across the available platforms, provides true converged IT capability for your business.

## CLOUD SERVICES

- ▶ PRIVATE CLOUD
- ▶ SHARED CLOUD
- ▶ PUBLIC CLOUD
